

What is PelleFirm?

PelleFirm is a cellulite treatment that uses a combination of radiofrequency heat along with a specialized massage head to temporarily reduce the appearance of cellulite.

No anesthesia or injections are used during the procedure.

Ask your provider if
PelleFirm is right for you.
For more information, visit
www.pelleve.com

Massage your
curves smooth
No surgery
No injections
No downtime

Indication for Use: PelleFirm is FDA cleared to provide heating for the purpose of elevating tissue temperature for selected medical conditions such as temporary relief of pain, muscle spasms, and increase in local circulation. The PelleFirm massage device is intended to provide a temporary reduction in the appearance of cellulite.

Most common side effects include mild swelling and redness, which typically resolve within 2-24 hours following the procedure.

PelleFirm®

How does PelleFirm work?

Specialized PelleFirm handpieces are used to deliver radiofrequency energy to the skin's surface. The combination of radiowaves and the specialized massage head work together to temporarily reduce the appearance of cellulite. This technique facilitates movement of fluids, which are then evacuated by the body's lymphatic system.

Does the procedure hurt?

No. The procedure is virtually painless with most patients reporting the treatment feels like a hot stone massage.

Am I a candidate for PelleFirm?

PelleFirm is recommended for anyone looking for temporary reduction in the appearance of cellulite for a smoother, more youthful look.

Tell your clinician if you have a pacemaker, defibrillator implant, metal implant, or autoimmune disease, as the PelleFirm procedure may not be right for you.

How many treatments are needed?

A series of weekly/biweekly treatments are recommended for visible results, with touch-ups every 6 months thereafter. Your clinician or aesthetician can recommend the right amount of treatments for you.

How long does the treatment take?

A single PelleFirm treatment can be performed in less than an hour. However, treatment time can vary from patient to patient based on specific goals and treatment areas.

When can I return to normal activities?

You can return to normal activities immediately following treatment. Although there are no restrictions to sunlight exposure, it is always advisable to use broad-spectrum SPF on a daily basis.

When will I see results?

The process of cellulite reduction takes time, and a series of treatments is typically required to see results. Since the effects are gradual, comparison with pre-treatment photographs is recommended to demonstrate the results.
