WOMEN'S WELLNESS

EMPOWER RF

INNOVATIVE FEMININE REJUVENATION

OLUBUNMI ALO, M.D., FACOG

Dr. Alo is Board-certified in Obstetrics and Gynecology. She had her OB/GYN residency training at the University of Buffalo, New York. At the completion of her residency, she was given the Marcos B. Gallego, M.D. Award in Recognition of Overall Clinical Excellence. Dr. Alo is a Fellow of The American College of Obstetricians and Gynecologists (ACOG).

Our team consists of dedicated individuals who are kind, friendly, and caring. Our staff is here to ensure a pleasant experience and up-to-date compassionate care for every stage of life.

We want to make sure you have all the facts you need to make an educated decision. Your health is our priority. Let us help create a customized plan just for you.

EMPOWERRF OFFERS SAFE AND EFFECTIVE TREATMENTS FOR WOMEN'S HEALTH AND WELLNESS

DO YOU SUFFER FROM?

- Vaginal Dryness (Vaginal Atrophy)
- Stress Urinary Incontinence (SUI)
- Urge Incontinence or Leaking
- Overactive Bladder or Urinary Frequency
- Interrupted Sleep from Multiple Trips to the Bathroom
- Painful Intercourse
- Chronic UTI
- Recurrent Vaginal Infections (Yeast or Bacterial)
- Lichen Sclerosus
- Vaginal Laxity
- Pelvic Floor Weakness
- Decreased Vaginal Sensation or Decreased Ability to Achieve Orgasm
- Vulvar or Vaginal Pain
- Episiotomy Pain
- Labial Laxity, Redundant or Crepey Vulvar Skin or Labia
- Displeasure or Lack of Confidence in Vaginal/Vulvar Appearance

Did you check even one of the above?

If so, then you could be a candidate for EmpowerRF treatments. Read on to learn about this innovative technology that could make significant improvements and a real difference in your quality of life. Learn how we can customize a plan for you.

YOU'RE NOT ALONE— THE STATISTICS

Stress Urinary Incontinence (SUI) Statistics:

- Approximately, 1 out of 3 women over the age of 45, and 1 out of every 2 women over 65 have stress urinary incontinence.
- Urinary incontinence increases with age. Over half of women with SUI also have Overactive Bladder.

Overactive Bladder (OAB) Statistics:

- OAB affects an estimated 33 million people in the U.S. And half of these people are struggling with Urgency Urinary Incontinence, when leakage actually occurs.
- Nocturia is quite common among women. Studies and surveys have found that 76% of women over age 40 report getting up to go to the bathroom at least once per night. About one-third of adults over age 30 make two or more nightly bathroom trips.
- Contrary to what many people think, overactive bladder is NOT a normal part of getting older, and isn't something you should think you have to live with. It's a real medical condition that deserves treatment.

Sexual Dysfunction Statistics:

- A recent study found that some form of female sexual dysfunction was reported in 58% of mothers one year after childbirth. The main complaints included insufficient lubrication, abnormal vaginal sensation, vaginal laxity, vaginal tightness, pain with intercourse and incontinence during intercourse.
- For 1 in 10 women, sex hurts—every time. A new study, which surveyed nearly 7,000 British women ages 16 to 74, found that women in their late 50s and early 60s were most likely to experience pain during sex, followed by women ages 16 to 24.

REKINDLING YOUR INTIMACY

DEALING WITH DRYNESS

WOMEN'S WELLNESS, REDEFINED

The EmpowerRF Experience.

The innovative EmpowerRF device—featuring seven different treatment options, all within one platform—is beneficial for essentially every woman! Safe and effective, EmpowerRF delivers life-changing technologies for women's wellness—treating a broad range of conditions such as urinary incontinence, vaginal dryness and pain, weak pelvic floor muscles, decreased sensation and so much more.

This state-of-the-art technology uses a combination of radiofrequency (RF) and electrical muscle stimulation (EMS) to help you regain your self-confidence and improve quality of life. Any woman with vaginal dryness, pain with intercourse, stress urinary incontinence, overactive bladder, vaginal laxity, chronic vaginal infections or lichen sclerosis is an excellent candidate for treatment. It can also benefit women desiring an aesthetic enhancement—replacing sagging or crepey skin with a more youthful, better-toned tissue.

It also offers improvement for women (and their partners) desiring a boost in sensation with intercourse. Our women's sexual health treatment options include:

- **FormaV** - Overall vaginal rejuvenation and bladder control for mild to moderate symptoms.
- **VTone** - Better-than-Kegels muscle stimulation and pelvic floor strengthening.
It's like doing thousands of Kegel exercises in one VTone session!
- **Morpheus8V** - Ground breaking RF microneedling for overall support, bladder control and tightening for moderate symptoms.
- **AVIVA** - The scarless, nonsurgical labiaplasty for enhanced aesthetic, functionality and sensation.

EmpowerRF patients are some of the happiest patients! Often they've had to know every bathroom location and wear a pad when going out. And with Empower RF treatments they have better bladder control, plus they get a better night's sleep with less waking up to rush to the bathroom. Women not able to have sex for years due to pain and dryness can result in better sensation and comfort with intercourse after EmpowerRF treatments.

WHAT IS MORPHEUS8V

A Game Changer in Non-surgical Feminine Rejuvenation

Morpheus8V is a revolutionary radiofrequency non-surgical procedure performed in-office that delivers pulses of energy deep into the vaginal and vulvar tissue. Morpheus8V treats deep beneath the surface improving the collagen and elastin production and increasing the strength and thickness of feminine tissue. This leads to more support, lubrication, and elasticity of the vagina and vulva.

Morpheus8V helps resolve stress urinary incontinence AND urge incontinence making it the first device that can markedly improve the symptoms of mixed incontinence. Studies performed, in conjunction with doctors around the world, show proven benefits for more than 90% of treated women.

This state of the art technology provides significant results for patients suffering from vaginal atrophy, stress urinary incontinence, urge incontinence, vaginal laxity, crepey and loose vulvar appearance. We are also seeing patients report improvement in lichen sclerosis, interstitial cystitis symptoms and vulvodynia.

Morpheus8V can be paired with FormaV or VTone to optimize your outcomes, as well as exosomes or creams to accelerate healing. Our providers will help you choose the custom regimen that fits your needs.

Morpheus8V is a series of three monthly treatments. Microneedling delivers targeted and precise treatment.

The Morpheus8V probe is inserted intravaginally to deliver controlled pulses of energy that tighten soft tissue and stimulate the production of elastin and collagen.

KEY BENEFITS OF MORPHEUS8V

- It's the only "all-in-one" treatment reported to improve: Urinary Leaking, Overactive Bladder, Sexual Enjoyment/ Responsiveness, and Vaginal Atrophy/Dryness
- Comfortable and safe in-office treatment with minimal downtime
- Long lasting results, easily maintained with an annual treatment
- Improves patient confidence and quality of life without surgery or prolonged downtime
- Decreases chronic vaginal infections and UTI

NON-SURGICAL VAGINAL REJUVENATION

WHAT IS FORMAV

FormaV is a safe and effective treatment option to help resolve complaints like dryness, itching, laxity, urinary incontinence. FormaV delivers radiofrequency energy into the tissue with a gentle sweeping motion throughout the vagina and the vulva. This procedure safely and effectively heats the tissue which increases blood flow, collagen and elastin throughout the treated area. It feels like a warm stone massage that leaves the vaginal tissue refreshed.

By heating the tissue, FormaV markedly relieves irritating vaginal and vulvar dryness and painful intercourse. Through increasing collagen, FormaV leads to better support to the bladder and urethra which helps relieve stress urinary incontinence. This increase in tissue strength also improves the overall appearance of the vagina and vulva after childbirth and aging. By having less laxity, sensation is improved and enhances the ability to enjoy intercourse and orgasms again. Additionally, by improving the surface tissue of the vaginal canal the overall vaginal pH improves, which decreases chronic UTI, recurrent bacterial and yeast infections. With all these improvements, FormaV clearly has a high patient satisfaction!

There is minimal preparation and downtime for FormaV and the treatment differs per patient. Patient plans include various combinations of the EmpowerRF platform. Our experienced providers will create a custom plan that targets your specific issues.

The **FormaV** device tip will be inserted into the vagina, where a warm sensation will be felt as the probe delivers radiofrequency comfortably.

Externally and internally, **FormaV** treats the vagina, vulva, clitoris and labia by enhancing the skin's structure and stimulating collagen.

Treatment:

15-30 minutes each
3 treatments recommended

KEY BENEFITS OF FORMAV

- Quick results with continued improvements over time with an annual maintenance treatment
- Treats: vaginal dryness, loose or stretched tissue, “sandy” feeling vagina, pain with intercourse, stress incontinence, thinning of internal and external vaginal membranes and decreased vaginal sensitivity
- Is it worth it? 94% of women on RealSelf say, “Yes!” It’s been awarded THE MOST WORTH IT treatment. There is no downtime and minimal discomfort

WHAT IS AVIVA

Aviva is life changing for women who are self-conscious, unhappy with the way their genital area appears or having pain with intercourse due to laxity. The two main reasons for having this procedure are discomfort and aesthetics. Many women feel discomfort or irritation when wearing tight clothing, having sexual relations, playing sports or even just exercising. Other women just want a better or more youthful genital appearance. Many women are born with large or irregular labia, while others develop this condition after childbirth or with aging. Traditionally, labiaplasty surgery has been performed under general anesthesia in a hospital required cutting away excess tissue, stitches, several days of recovery, post surgical care and a lengthy break from sexual activity.

On the other hand, the Aviva procedure dramatically reduces recovery time, uses a local anesthetic and requires no stitches. It's easy, safe, has a quick return to activities and gives women back peace of mind about their genital appearance.

What is the technology behind Aviva? A safe and effective treatment, Aviva is different because it uses RFAL (Radio-Frequency Assisted Lipolysis) to address some of the shortcomings associated with traditional surgical labiaplasty. Our team uses energy both internally and externally which tightens skin layers as it removes unwanted bulky tissue resulting in a more youthful, tighter appearance.

Until Aviva there really weren't any other non-surgical solutions that could dramatically reduce the size of the labia. Performed under local anesthesia, Aviva permanently extracts unwanted thickness through pinpoint introduction sites and then tightens and shrinks the tissue using the power of radiofrequency. Because tissue is immediately eliminated, it is a true form of reduction. The results are permanent with most patients back at work without restriction immediately.

Patients usually only require one treatment per area. Aviva improves over a period of a few months and the full extent of results take up to 3-6 weeks to be visible.

KEY BENEFITS OF AVIVA

- Non-surgical alternative to traditional labiaplasty
- No stitches, scarring or lengthy downtime
- Tightens the labia minora, labia majora, clitoral hood and mons pubis
- Improves clitoral stimulation
- Tightens the vaginal opening for improved sensation with intercourse

WHAT IS VTONE

Urinary incontinence is very common among women, particularly those who have experienced childbirth or pregnancy and women who are peri-menopausal or in menopause. VTone is specifically designed to strengthen the muscles associated with incontinence and is FDA-cleared to improve all types of urinary incontinence including stress urinary incontinence, urge incontinence, overflow incontinence and function incontinence.

VTone utilizes electromagnetic energy to deliver thousands of supramaximal pelvic floor muscle contractions in a single session. These contractions re-educate the muscles of incontinent patients. This gentle, effective treatment series rehabilitates a woman's pelvic floor muscles to improve the overall quality of life.

VTone is a painless treatment that requires no anesthesia. It has no downtime or recovery period and uses no injections, medication or incisions.

The treatment is used to:

- Tightens vaginal tissues
- Strengthens Kegel muscles
- Restores vaginal muscle tone
- Increases vaginal sensitivity
- Reduces urinary concerns
- Improves sexual pleasure
- Improves appearance of lax opening after childbirth

KEY BENEFITS OF VTONE

- Highly effective, non-invasive procedure administered in-office to strengthen weak pelvic floor muscles and improve urinary incontinence symptoms
- The two-sided tip inserts quickly and comfortably into the vaginal canal
- Boosts patient confidence and quality of life without surgery or prolonged downtime
- Strengthening and support you can feel

A STEP-BY-STEP GUIDE

BEFORE TREATMENT

You'll come in for a confidential consultation with one of our vaginal rejuvenation experts to assess the symptoms you're experiencing and develop a customized plan to improve your intimacy, bladder control and additional vaginal concerns.

DAY OF TREATMENT

Most treatments need very little preparation, have no downtime, and can be performed on the same day. On the day of treatment, please arrive 10-15 minutes early to fill out any necessary paperwork.

For each treatment, allow approximately 45 minutes for VTone, 15 minutes for FormaV and 30 minutes for Morpheus8V. If Morpheus8V is recommended, topical anesthetic is applied to make the treatment completely tolerable. It's safe for you to drive yourself to and from all of your treatments.

AFTER TREATMENT

There are very few or no restrictions for most EmpowerRF treatments. With Morpheus8V we recommend avoiding intercourse, pelvic exams, and tampons for 2-3 days and keep the area moist with Alastin Soothe + Protect Recovery Balm.

Most patients will note results after the first treatment and continued improvement after the complete series of treatments. To maintain optimal results, annual maintenance treatments are highly recommended.
