

WELLNESS RETINAL SCREENING

At IdealEyes Optometry, we are continuously investing in new technologies to detect eye diseases as early as possible. There are over 200 different conditions that can be detected within the eye, and our mission is to be able to diagnoses and treat those conditions, such as glaucoma and macular degeneration, before they can threaten your vision or health.

As part of your eye health examination, **Drs. Cash and McAllister recommend our WELLNESS RETINAL SCREENING**. These **non-invasive screening** tests provide detailed images of the back part of the eye, allowing detection of potentially blinding eye diseases. The tests are quick, taking less than 5 minutes, and often replace the need for the use of dilating drops. This screening exam is not covered by medical or vision insurance plans, and the fee is \$49.

Please choose ONE:

- I choose to have the Wellness Retinal Screening and be responsible for the small \$49 fee.
- I **DECLINE** the Wellness Retinal Screening and choose to have my eyes dilated. I understand the risk that I could have retinal disease that could remain undetected by my doctor if I refuse this testing.

Additionally, we may recommend a **DILATED PUPIL EXAMINATION** for certain patients (e.g. diabetic patients), when you report certain symptoms (e.g. flashes of light), or even for our established patients without eye disease at certain intervals. This testing involves the use of eyedrops. Side effects of this testing include sensitivity to light and blurred near vision. Dilated pupil examination is **included** as part of your comprehensive eye exam.

- I understand the side-effects of pupil dilation and agree to this procedure if necessary.
